Pentest Report

Some of the exploits on metasploitable 3

1. GlassFish

Current sponsor of GlassFish Server is Oracle Corporation. They renamed is as Oracle GlassFish Server. Previously it was an open-source server project started by Sun Microsystems for the Java EE platform.

Running on Port 4848(HTTP), 8080(HTTP) and 8181(HTTPS)

2. Apache Struts

Apache Struts is a framework used the Java Developers for developing Java EE web applications. They adopt a model–view–controller architecture with the help of Apache Struts, which an open-source web application framework.

Running on Port 8282(HTTP)

3. Tomcat

Tomcat Server, is an open-source Java Servlet Container developed by the Apache Software Foundation (ASF). It is also called Tomcat and it builds on top of it, several Java EE specifications including Java Servlet, Java Server Pages (JSP), Java EL, and Web Socket. It also provisions a raw Java HTTP web server environment in which Java executables can run.

Running on Port 8282(HTTP)

4. Jenkins

An open source automation server written in Java called Jenkins, helps to automate software development process that involves no human intervention. It is a process of continuous integration and supporting technical side of implementation.

Running on Port 8484(HTTP)

5. IIS-FTP

FTP Server function is mainly transferring of files on Internet. The FTP server itself includes a file transfer protocol (FTP) address that is exclusively used to receiving an FTP connection.

Running on Port 21(FTP)

6. IIS-HTTP

Running on Port 80(HTTP)

7. PsExec

Telnet can be replaced with PsExec with its is small and easy to implement features like having the ability to execute processes on other systems, complete with full interactivity for console applications, with no manual install of client software. Main enhancements of PsExec are promoting interactive command prompts on remote systems and remote-enabling tools like ipconfig, without which information gathering of remote systems would be a nightmare.

Running on Port 445(SMB) and 139(NetBIOS)

8. WinRM

Windows Vista has a feature called Windows Remote Management (WinRM) which has the ability to run management scripts remotely. WinRM is handled by WS-Management Protocol which is a part of SOAP (Simple Object Access Protocol). Windows Millennium Edition (Me), Windows 2000, Windows XP or Windows Server 2003 computers with Windows Management Instrumentation (WMI) on them, has equivalent features as WinRM.

Running on Port 5985(HTTPS)

9. Chinese Caidao

China Chopper is a web site with hidden information and does not have any creditable useful information except for a good blog post from security researcher Keith Tyler.

Running on Port 80(HTTP)

10. ManageEngine

ManageEngine promotes enterprise IT management software for your service management, operations management, Active Directory and security needs.

Running on Port 8020(HTTP)

11. ElasticSearch

Elasticsearch is a search engine based on Lucene. It provides a distributed, multitenant-capable full-text search engine with an HTTP web interface and schema-free JSON documents.

Running on Port 9200(HTTP)

12. Apache Axis2

Apache Axis2 is a core engine for Web services. It is a complete re-design and re-write of the widely used Apache Axis SOAP stack.

Running on Port 8282(HTTP)

13. WebDAV

Web Distributed Authoring and Versioning is an extension of the Hypertext Transfer Protocol that allows clients to perform remote Web content authoring operations.

Running on Port 8585(HTTP)

14. SNMP

Simple Network Management Protocol is an Internet Standard protocol for collecting and organizing information about managed devices on IP networks and for modifying that information to change device behavior.

Running on Port 161(UDP)

15. MySQL

Michael Widenius's, daughter's name is affixed to the fist part of MYSQL, as "MY". Meaning of SQL is actually Structured Query Language. MYSQL is an open source relational Database Management System (DBMS).

.**Running on Port 3306(TCP)**

16. JMX

Java Management Extensions (JMX) is a Java technology that provides tools for controlling applications, system objects, devices (such as printers) and service related networks. Those resources are depicted by objects named MBeans (for Managed Bean). In the API, classes can be automatically loaded and started. Controlling applications can be implemented using the Java Dynamic Management Kit.

Running on Port 1617(TCP)

17. WordPress

WordPress.com is a blogging platform that is owned and hosted online by Automattic. It is run on WordPress, an open source piece of software used by bloggers.

Running on Port 8585(HTTP)

18. PHPMyAdmin

PHPMyAdmin is a free and open source administration tool for MySQL and MariaDB. As a portable web application made mainly in PHP, it has become one of the most popular MySQL administration tools, especially for web hosting services.

Running on Port 8585(HTTP)

19. Ruby on Rails

Ruby on Rails, or Rails, is a server-side web application framework written in Ruby under the MIT License. Rails is a model–view–controller framework, providing default structures for a database, a web service, and web pages.

Running on Port 3000(HTTP)

New Item
People
Build History
Manage Jenkins
Credentials
Build Queue
No builds in the queue.
Build Executor Status
1 Idle
2 Idle
Script Console
Type in an arbitrary Groovy script and execute it on the server. Useful for trouble-shooting and diagnostics. Use the 'println' command to see the output (if you use System.out, it will go to the server's stdout, which is harder to see.) Example:
println(Jenkins.instance.pluginManager.plugins)
All the classes from all the plugins are visible. jenkins.*, jenkins.model.*, hudson.*, and hudson.model.* are pre-imported.
println new ProcessBuilder("cmd.exe", "/C whoami").redirectErrorStream(true).start().text
Run

File Edit View Search Terminal Help
you must define such a user - the username and password are arbitrary. It is
strongly recommended that you do NOT use one of the users in the commented out
section below since they are intended for use with the examples web
application.
-->
<!--
NOTE: The sample user and role entries below are intended for use with the
examples web application. They are wrapped in a comment and thus are ignored
when reading this file. If you wish to configure these users for use with the
examples web application, do not forget to remove the <!.. ..> that surrounds
them. You will also need to set the passwords to something appropriate.
-->
<!--
<role rolename="tomcat"/>
<role rolename="role1"/>
<user username="tomcat" password="<must-be-changed>" roles="tomcat"/>
<user username="both" password="<must-be-changed>" roles="tomcat,role1"/>

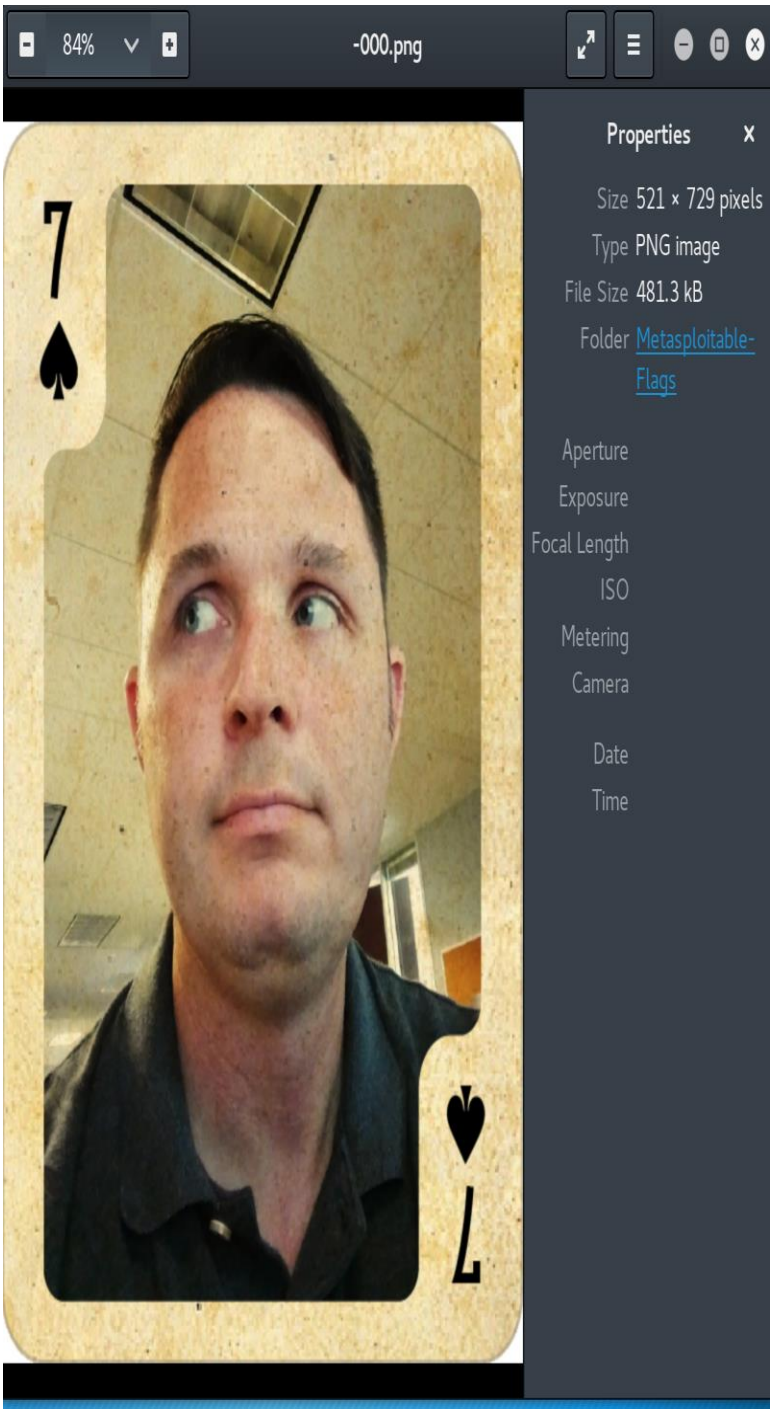
Jack of Clubs

When you got access access to the System, and went to C:\Windows\System32 and the .png file would be available for you at that point.

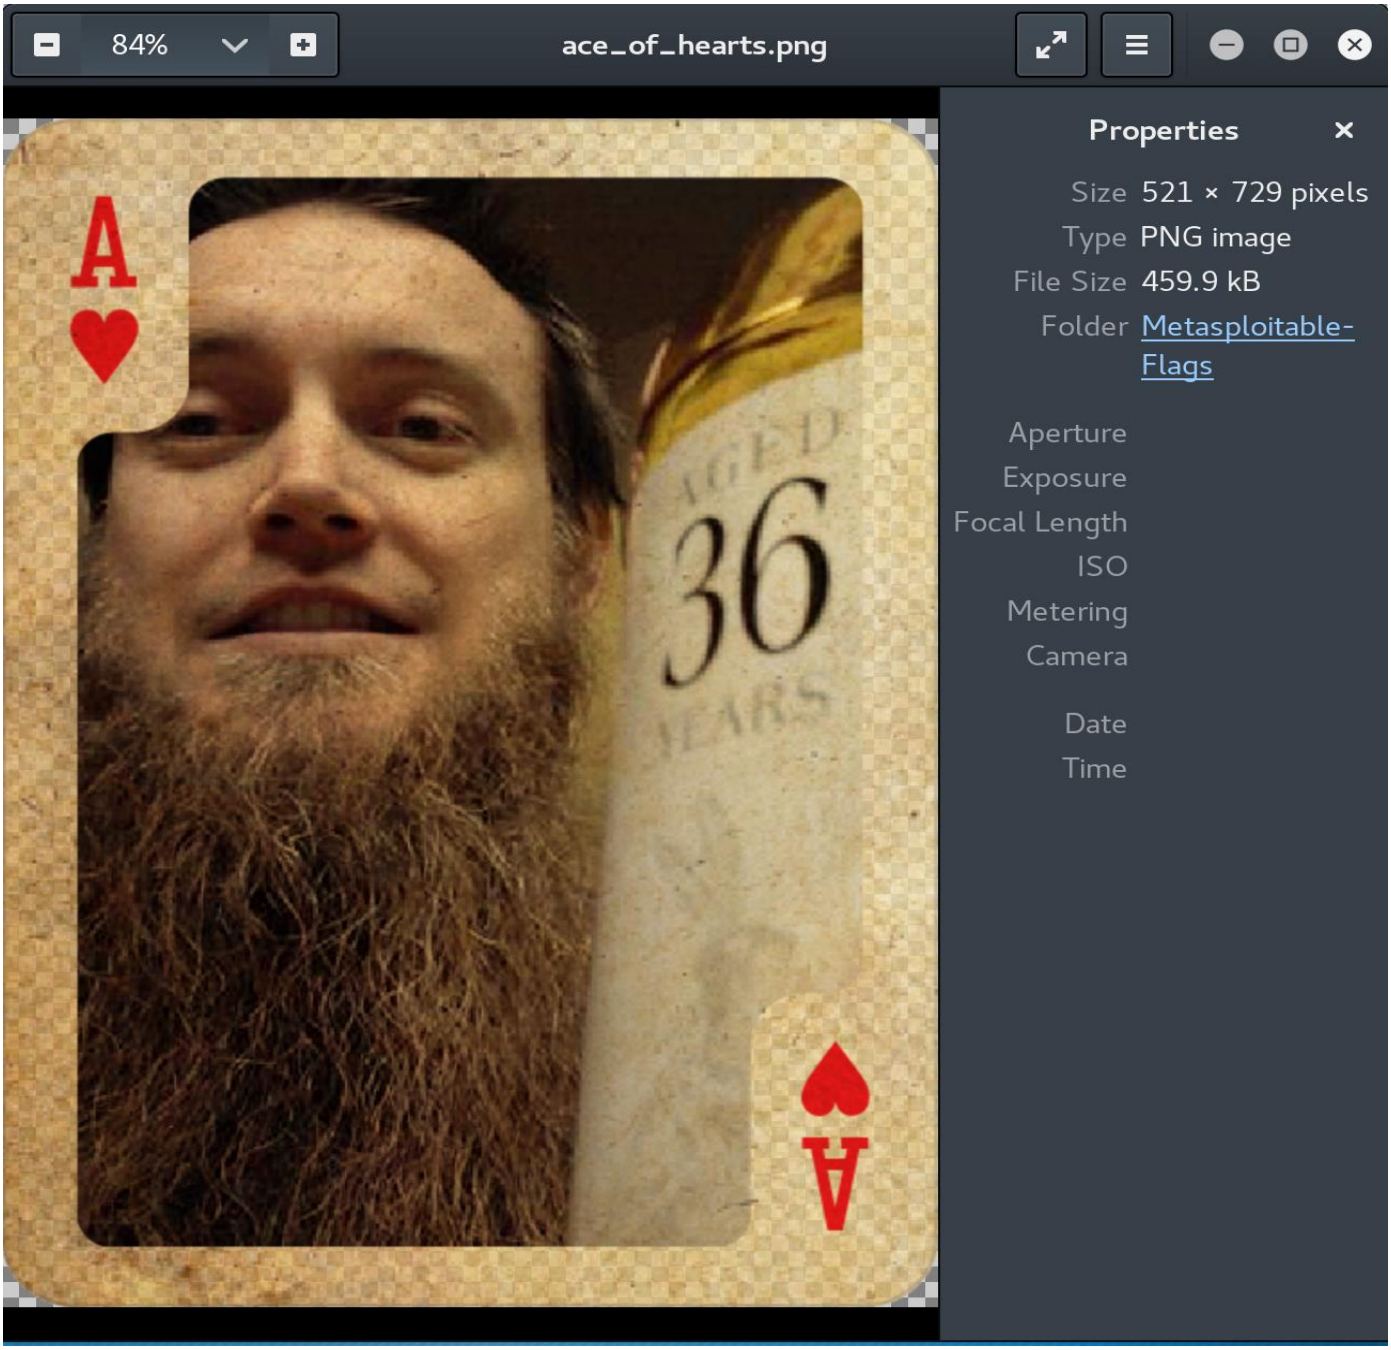
Seven of Spades

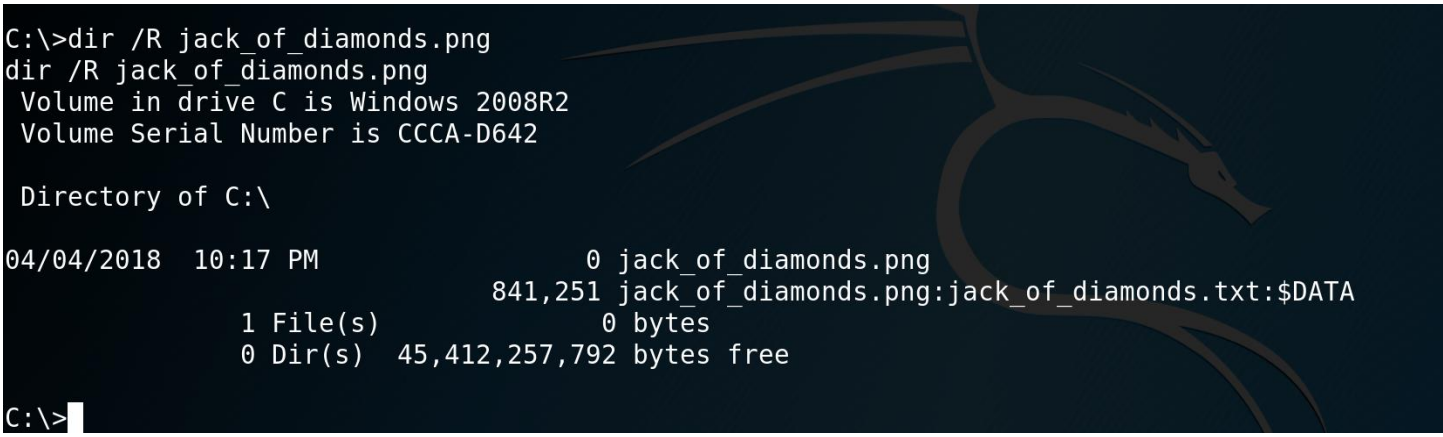
The Seven of Spades was found at C:\Users\Public\Documents. It was a .pdf file. Used pdfimages in order to retrieve the FLAG



Ace of Hearts

The Ace of Hearts was found at C:\Users\Public\Pictures. It was a .jpg, but all the other flags were .png and also the .jpg flag different from the rest. By using binwalk on the file, you would notice that there was a zip file hidden inside. I copied the file and modified the extension to a .zip extension and then ultimately unzipped the file to discover the flag.





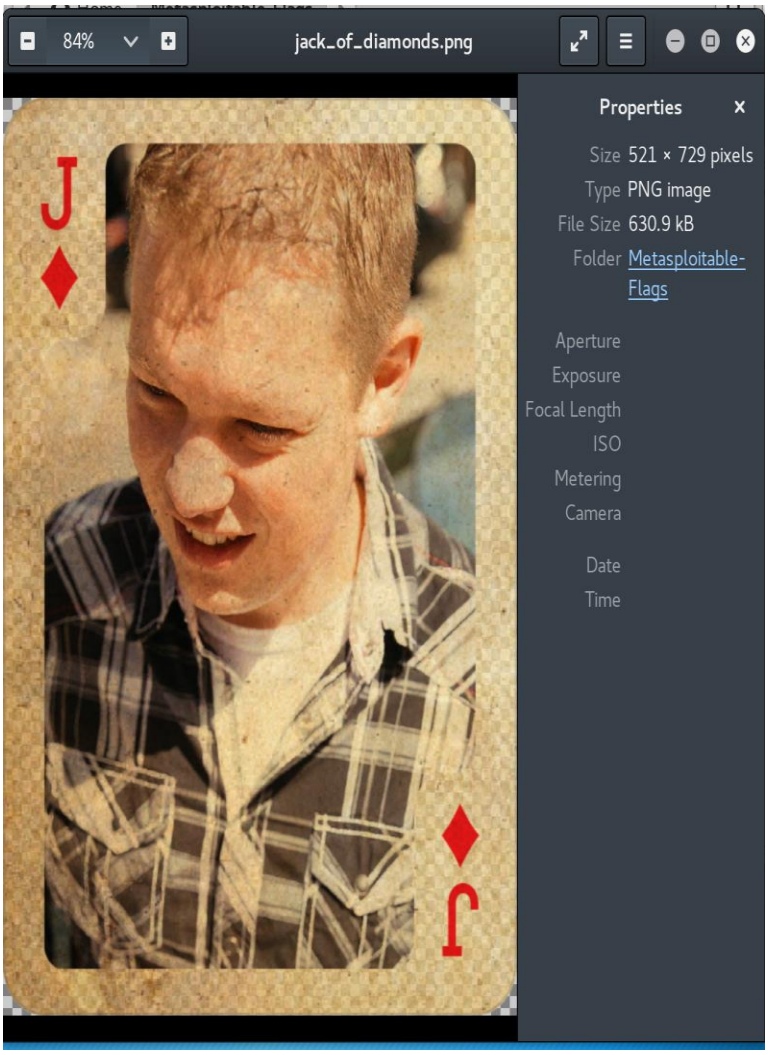
```
powershell -c get-content -Path C:\jack_of_diamonds.png -Stream jack_of_diamonds.txt
```

You would see that it seemed like base64. Piped the alternate data stream into another file and then moved that to your attacking machine. I added the extra '==' to the end of the Base64 string and then decoded it into a png to show the flag.

```
cat jack_of_diamonds.b64 | base64 --decode > jack_of_diamonds.png
```

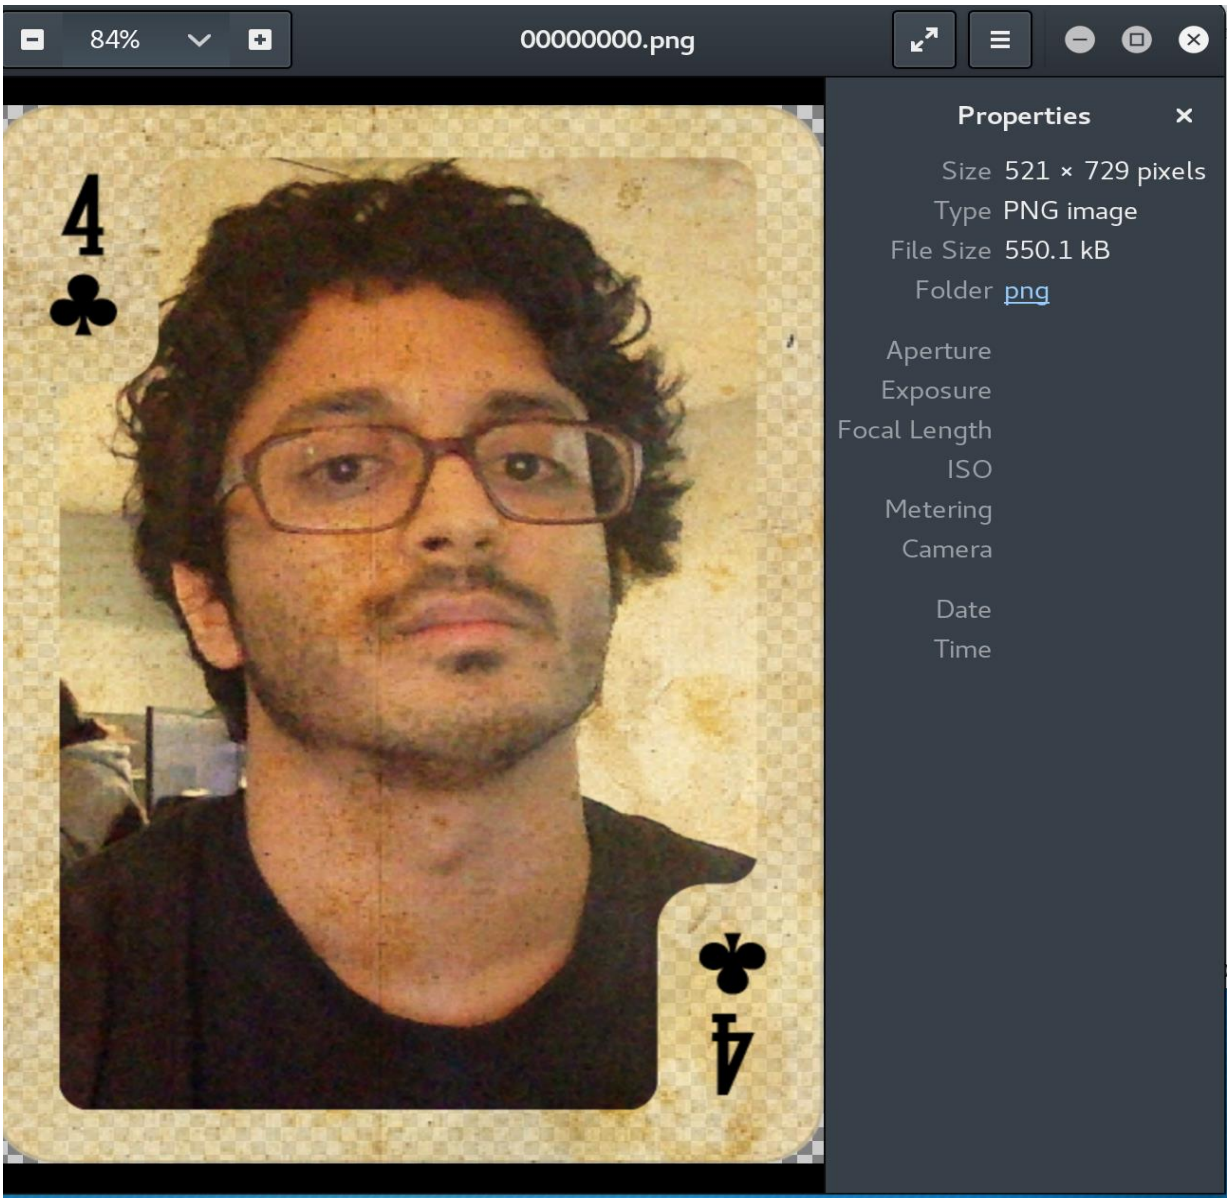
Jack of Diamonds

The Jack of Diamonds was found at C:. When I examined the file, I could see that it is a zero (0) byte file. The flag was hidden inside an alternate data stream.



Four of Clubs

The Four of Clubs was found in C:\Users\Public\Music. The file was a .wav, however using binwalk on the file it showed to have a .png hidden inside. To got the .png I used a tool called foremost and extracted the image.



Ten of Diamonds

The Ten of Diamonds was found in C:\Users\Public\Pictures. The file is a .png file, but it could not be viewed. Looking at the file with binwalk I could see the compressed part of the image, but there was no PNG header. On Opening the file in hexeditor I was able see that the letters PNG have been replaced with MSF. I altered these bytes to '50 4e 47' which provided me with the PNG header. I saved the file and viewed the flag.

Modules

- auxiliary/scanner/http/tomcat_enum
- auxiliary/scanner/http/tomcat_mgr_login
- exploits/multi/http/tomcat_mgr_deploy
- exploits/multi/http/tomcat_mgr_upload
- post/windows/gather/enum_tomcat

Jenkins

Ports

- 8484 - HTTP

Credentials

- None enabled by default
-

Start/Stop

- Stop: Open services.msc. Stop the jenkins service.
- Start: Open services.msc. Start the jenkins service.

Modules

- exploits/multi/http/jenkins_script_console
- auxiliary/scanner/http/jenkins_enum

IIS - FTP

Ports

- 21 - FTP

Credentials

Windows credentials

Access

Any FTP client should work

Start/Stop

- Stop: `net stop msftpsvc`
- Start: `net start msftpsvc`

IIS - HTTP

Ports

- 80 - HTTP

Credentials

- U: vagrant
- P: vagrant

Start/Stop

- Stop: Open services.msc. Stop the World Wide Web Publishing service.
- Start: Open services.msc. Start the World Wide Web Publishing service.

Vulnerability IDs

- CVE-2015-1635

Modules

- auxiliary/dos/http/ms15_034_ulonglongadd

Ports

- 445 - SMB
- 139 - NetBIOS

Credentials

- Any credentials valid for Metasploitable3 should work. See the list here

Start/Stop

- Enabled by default

Vulnerabilities

- Multiple users with weak passwords exist on the target. Those passwords can be easily cracked and used to run remote code using psexec.

Modules

- exploits/windows/smb/psexec
- exploits/windows/smb/psexec_psh

SSH

Ports

- 22 - SSH

Credentials

- Any credentials valid for Metasploitable3 should work. See the list here

Access

- Use an SSH client to connect and run commands remotely on the target.

Start/Stop

- Enabled by default

Vulnerabilities

- Multiple users with vulnerable passwords exist on the target. Those passwords can be easily broken into. Once a session is opened, remote code can be executed using SSH.

Modules

WinRM

Ports

- 5985 - HTTPS

Credentials

- Any credentials valid for Metasploitable3 should work. See the list here

Access

Start/Stop

- Stop: Open services.msc. Stop the Windows Remote Management service.
- Start: Open services.msc. Start the Windows Remote Management service.

Vulnerabilities

- Multiple users with weak passwords exist on the target. Those passwords can be easily cracked and WinRM can be used to run remote code on the target.

Modules

- auxiliary/scanner/winrm/winrm_cmd
- auxiliary/scanner/winrm/winrm_wql
- auxiliary/scanner/winrm/winrm_login
- auxiliary/scanner/winrm/winrm_auth_methods
- exploits/windows/winrm/winrm_script_exec

chinese caidao

Ports

- 80 - HTTP

Credentials

- Any credentials valid for Metasploitable3 should work. See the list here
-

Start/Stop

- Stop: Open services.msc. Stop the World Wide Web Publishing service.
- Start: Open services.msc. Start the World Wide Web Publishing service.

Modules

- auxiliary/scanner/http/caidao_bruteforce_login

ManageEngine

Ports

8020 - HTTP

Credentials

Username: admin Password: admin

Start/Stop

- Stop: In command prompt, do `net stop ManageEngine Desktop Central Server`
- Start: In command prompt, do `net start ManageEngine Desktop Central Server`

Vulnerability IDs

- CVE-2015-8249

Modules

- exploit/windows/http/manageengine_connectionid_write

ElasticSearch

Ports

9200 - HTTP

Credentials

No credentials needed

Start/Stop

- Stop: In command prompt, do `net stop elasticsearch-service-x64`
- Start: In command prompt, do `net start elasticsearch-service-x64`

Vulnerability IDs

- CVE-2014-3120

Modules

- exploit/multi/elasticsearch/script_mvel_rce

Apache Axis2

Ports

8282 - HTTP

Credentials

No credentials needed

Start/Stop

Log into Apache Tomcat, and start or stop from the application manager.

Vulnerability IDs

- CVE-2010-0219

Modules

- exploit/multi/http/axis2_deployer

WebDAV

Ports

8585 - HTTP

Credentials

No credentials needed

Start/Stop

- Stop: In command prompt, do `net stop wampapache`
- Start: In command prompt, do `net start wampapache`

SNMP

Ports

161 - UDP

Credentials

Community String: public

Access

Load the auxiliary/scanner/snmp/snmp_enum module in Metasploit and to parse the SNMP data.

Start/Stop

- Stop: In command prompt, do `net stop snmp`
- Start: In command prompt, do `net start snmp`

Modules

- auxiliary/scanner/snmp/snmp_enum

MySQL

Ports

3306 - TCP

Credentials

U: root P:

Access

Use the mysql client to connect to port 3306 on Metasploitable3.

Start/Stop

- Stop: In command prompt, do `net stop wampmysql`
- Start: In command prompt, do `net start wampmysql`

Modules

- windows/mysql/mysql_payload

JMX

Ports

1617 - TCP

Credentials

No credentials needed

Start/Stop

- Stop: In command prompt, do `net stop jmx`
- Start: In command prompt, do `net start jmx`

Vulnerability IDs

- CVE-2015-2342

Modules

- multi/misc/java_jmx_server

Wordpress

Ports

8585 - HTTP

Credentials

No credentials needed

Start/Stop

- Stop: In command prompt, do `net stop wampapache`
- Start: In command prompt, do `net start wampapache`

Vulnerable Plugins

- NinjaForms 2.9.42 - CVE-2016-1209

Modules

- unix/webapp/wp_ninja_forms_unauthenticated_file_upload

Remote Desktop

Ports

3389 - RDP

Credentials

Any Windows credentials

Access

Use a remote desktop client. Either your OS already has one, or download a 3rd party.

Start/Stop

- Stop: `net stop rdesktop`
- Start: `net start rdesktop`

Modules

N/A

PHPMyAdmin

Ports

8585 - HTTP

Credentials

U: root P:

Start/Stop

- Stop: In command prompt, do `net stop wampapache`
- Start: In command prompt, do `net start wampapache`

Vulnerability IDs

CVE-2013-3238

Modules

- multi/http/phpmyadmin_preg_replace

Ruby on Rails

Ports

- 3000- HTTP

Credentials

N/A

Start/Stop

- Stop: Open task manager and kill the ruby.exe process
- Start: Go to Task Scheduler and find the corresponding task. Right-click and select Run.

Vulnerability IDs

- CVE-2015-3224

Modules

- exploit/multi/http/rails_web_console_v2_code_exec
